Sliding Shower Screen System with Soft Close

Installation Manual

Step 1: Cut the overhead track to length. Track length=W

Step 2: Using a laser level line tool, measure and mark the mounting height for brackets. Bracket mounting height = $H - 33\text{mm}$ (the upper hole)

Step 3: Drill fixing holes into the substrate and install brackets.

Step 4: Place the track onto the brackets. Check and ensure the track is level.

Remove the track.

Step 5: Install the blocks and dampers into the track.

Step 6: Put the track on the wall mount brackets.

Use the screw to secure the brackets to the blocks inside the track.

Step 7: Install fixed panel

Step 8: Install rollers and anti-derail wheel onto the door panel

Step 9: Hang the door panel onto the track and fix the floor guide into place.

Step 10: Adjust the height and level of the door by rotating the eccentric cams on the roller wheels.

Step 11: Adjust the soft-close dampeners location, setting the door's open and closed positions.

Step 12: Adjust the anti-derail wheel upwards to prevent the door lifting off the track and tighten the adjustment screw.

Step 13: Install the track cover plate using double-sided tape or screws.
